

Along the western shores of Notre Dame Bay lie several clusters of small communities with their roots in the fishing industry. Economic changes have led to an initiative to showcase the natural beauty of this sparsely populated, unspoiled area in a way that most appeals to visitors. Over the past several years traditional routes have been developed into a network of elaborate trails to prominent lookouts. Areas which were previously inaccessible now have comfortable trails of light to moderate difficulty, revealing sights previously unseen, even to local residents. A great number of amenities ease the difficulty in hiking in an area where rough terrain and dense underbrush pose a challenge. Gazebos, viewing platforms, steps, boardwalks, bridges, benches and tables have been generously distributed to create hiking destinations that appeal to a cross-section of the population. People of all ages and in varying physical condition can find something appealing amongst the many choices for hiking Green Bay Trails.

As a photographer hired to document the region in pictures, I have been pleased to discover adventure in my own backyard. The north shore forest and rugged headlands meet the North Atlantic in a pristine interzone where history, culture, marine and terrestrial ecology merge. A great variety of sea, forest and landscapes are found here. On a smaller scale, abundant wild flora and fauna heighten the interest for outdoor lovers. This brief booklet contains diagrams and information to aid in the enjoyment of the hiking experience. All photographs shot on location are used to illustrate various points of interest. Future editions will include new trails with more to discover as interest grows and the development continues.

Dave Tilley

- Trail Statistics -

	Total Length	Average Gradient	Difficulty	Lookouts	Max. Elev.
Alexander Murray Trail - Kings Point	12 Km	.025	moderate	2	350m
